The Twin Cam, the predecessor to the Milwaukee Eight, had been powering Harleys for 17 model years - a long time by anyone's standards. It's not uncommon to hear Harley critics knocking the brand for being "stuck in the past," but when even the guys with bar and shield tattoos are complaining about why there's still no new engine out, you've got a problem.

~~Harley Davidson Milwaukee Eight vs. Twin Cam Engine (Best ...~~

I just received the January issue of American iron magazine. Techline section written by Donny Peterson of Heavy Duty cycle states that he is finding problems with all twin cams engines. Problems that were thought to be only on early 99 and 2000 models. Quote:"We are finding damaged Ina inner cam bearings, worn timing chain adjusters, and cam lobe damage on ALL year twin cams" Huh?!?...AIN"T THIS FREAKIN GREAT!....I guess the more things change the more they stay the same with Harley Davidson.

A serious Twin Cam problem that is seldom talked about is crankshaft shifting. Under hard deceleration, acceleration or burnouts, the Twin Cam's pressed-together crankshaft can twist out of true, sometimes as much as .030 inch or even more in worst circumstances. An ideally trued crank should be trued to within .001 inch.

When the crankshaft does not run true, you have excessive run out. This creates vibrations and in some instances create problems with oil pumps and cam gears not running true on the end of the shaft. Run out should be measured on both shafts as the spline shaft can have problems of its own (remember problem number 1...).

Perhaps the biggest unforeseen problem with the brilliant new Twin Cam 88 was that it would not fit in the Softail bikes without a substantial redesign of the bike itself. The Softail frame was a tighter fit and did not provide room to rubber mount the motor like the Dyna and touring models do, which was considered a necessity due to the larger pistons and increased vibration.
