This book evaluates and compares risk regulation and safety management for offshore oil and gas operations in the United States, United Kingdom, Norway, and Australia. It provides an interdisciplinary approach with legal, technological, and sociological perspectives on their efforts to assess and prevent major accidents and improve safety performance offshore. Presented in three parts, the volume begins with a review of the technical, legal, behavioral, and sociological factors involved in designing, implementing, and enforcing a regulatory regime for industrial safety. It then evaluates the four regulatory regimes that encompass the cultural, legal, and other contextual factors that influence their design and implementation, along with their reliance on industrial expertise and standards and the use of performance indicators. The final section presents an assessment of the resilience of the Norwegian regime and its capacity to keep pace with new technologies and emerging risks, respond to near miss incidents, encourage safety culture, incorporate vested rights of labor, and perform inspection and self-audit functions. This book is highly relevant for those in

The Oxford Manual of Major Incident Management brings together and integrates the key facts for all those involved in major incident planning and response. This will be an invaluable resource for a wide range of professionals, from doctors across emergency medicine, public health, general practice, pre-hospital care, and communicable disease control, to nurses, emergency services, administrators and planners. Transport, industrial, and natural disasters have always necessitated a coordinated interagency, multi-professional response, and with the rising threat in terrorist incidents, that need has never been greater. The information base required to plan for and manage this response has now been collected together into a single user friendly volume, clearly describing the hazards and their management at all stages. This manual will be useful in planning for all types of major incident, acting as the basis for training, and as an aide-memoir during an event. Authoritative, comprehensive, and concise, this quick-reference guide will be of use to both established experts and to novices in the field.

Internal auditing is an essential tool for managing compliance, and for initiating and driving continual improvement in any organization's systematic HSEQ performance. Health and Safety, Environment and Quality Audits includes the latest health and safety, environmental and quality management system standards – ISO 9001, ISO 14001 and ISO 45001. It delivers a powerful and proven approach to risk-based auditing of business-critical risk areas using ISO, or your own management systems. It connects the 'PDCA' approach to

implementing management systems with auditing by focusing on the organization's context and the needs and expectations of interested parties. The novel approach leads HSEQ practitioners and senior and line managers alike to concentrate on the most significant risks to their objectives, and provides a step-by-step route through The Audit Adventure™ to provide a high-level, future-focused audit opinion. The whole approach is aligned to the international standard guidance for auditing management systems (ISO 19011). This unique guide to HSEQ and operations integrity auditing has become the standard work in the field over three editions whilst securing bestseller status in Australasia, Europe, North America and South Africa. It is essential reading for senior managers and auditors alike – it remains the 'go to' title for those who aspire to drive a prosperous and thriving business based on world-class HSEQ management and performance.

This book contains in-depth articles written by scholars, international lawyers, and practitioners from around the world. It deals with the environmental aspect of the hydrocarbon cycle in general and oil and gas exploration and production in particular. Its main thrust is management of environmental legal risks and issues in upstream operations.
