~~Answer Key~~
Fascia is a layer of thickened connective tissue that covers the entire muscle and is located over the layer of epimysium that also makes up

~~Microanatomy of Muscles~~

Despite the vast array of different muscles that attach and move the skeletal structure, the anatomy of the skeletal muscles is basically the same throughout the body. Skeletal muscles are made up of long multinucleate cells that are cylindrical in shape. The muscles are almost always attached directly to the bones, and unlike the other two muscles types, cardiac and smooth, are under voluntary control.
