Bone dislocation. If you dislocate your sternum, it usually become separated from the clavicle. However, ribs can separate from the sternum as well.

Sternum Popping: Treatment, Pain, Chest Pain, and Symptoms

Anterior—the end of the clavicle is pushed forward, in front of the sternum (breastbone) Posterior—the end of the clavicle is pushed backward, behind the sternum and deep into the upper chest; Although both kinds of dislocations are serious injuries, a posterior dislocation requires more urgent medical attention.

Sternoclavicular (SC) Joint Disorders - OrthoInfo - AAOS

A sternoclavicular dislocation is a relatively uncommon form of shoulder injury because the sternoclavicular joint, between the sternum and clavicle, is reinforced by a number of strong bands of tissue called ligaments, as well as a capsule surrounding the joint. Motor vehicle accidents, sporting injuries and falls may all give rise to sternoclavicular dislocation.

What Is Sternoclavicular Dislocation? (with pictures)

To the Editor: —The following unusual injury should be recorded: A Negro, about 30 years of age, was struck by a truck while he was bent forward. The truck forced him backward against a pillar before it was stopped, compressing the lower part of the chest and the abdomen. He complained that he felt a loud snap in his chest and subsequently had severe pain over the sternum at the level of the ...

DISLOCATION OF STERNUM | JAMA | JAMA Network

Plan the sagittal slices on the coronal plane; angle the position block parallel to the body of the sternum. Check the positioning block in the other two planes. An appropriate angle must be given in the axial plane (perpendicular to the body of the sternum). Slices must be sufficient to cover both sternoclavicular joints.

A sternoclavicular dislocation is an injury that causes the bones of the sternoclavicular joint to move from their normal positions. The sternoclavicular joint is the joint made where clavicle...

Sternoclavicular Dislocation: Treatment & Recovery Time ...

About 8-10% of admitted patients with blunt injury to the chest have been found to have sternal fractures. (1, 2) Most commonly these occur secondary to direct chest wall impact, likely from the steering wheel or dashboard of a vehicle involved in collision. Isolated sternal fractures can be complicated by significant cardiac contusion and ...

Musculoskeletal - Sternum

The sternum is displaced posteriorly, and as a consequence, the ribs protrude anteriorly. The aberrant position of these skeletal structures results in a reduction of prevertebral space, leftward displacement and axial rotation of the heart, and reduction of the space occupied by the left lung (, 11,, 15).

Imaging Appearances of the Sternum and Sternoclavicular ...

Indirect forces transmitted to the sternum through the clavicles, the chin, or the upper two ribs cause backward displacement of the manubrium. 5 Tremendous force is required to fracture or dislocate the MSJ. The diagnosis of MSJ disruption is suspected clinically and detected by a lateral roentgenogram of the thorax.
